

Successful implementation of Internet Camera System as an ASP solution in SoftBank.

System K, Japan has provided an enhanced service for Video Surveillance through IP technology for SoftBank Corporation. SoftBank is a Japanese telecommunications and media corporation, with operations in many technologically advanced fields in the Japanese and international markets. SoftBank was previously known as Vodafone K.K. (also known as Vodafone Japan) and J-PHONE.

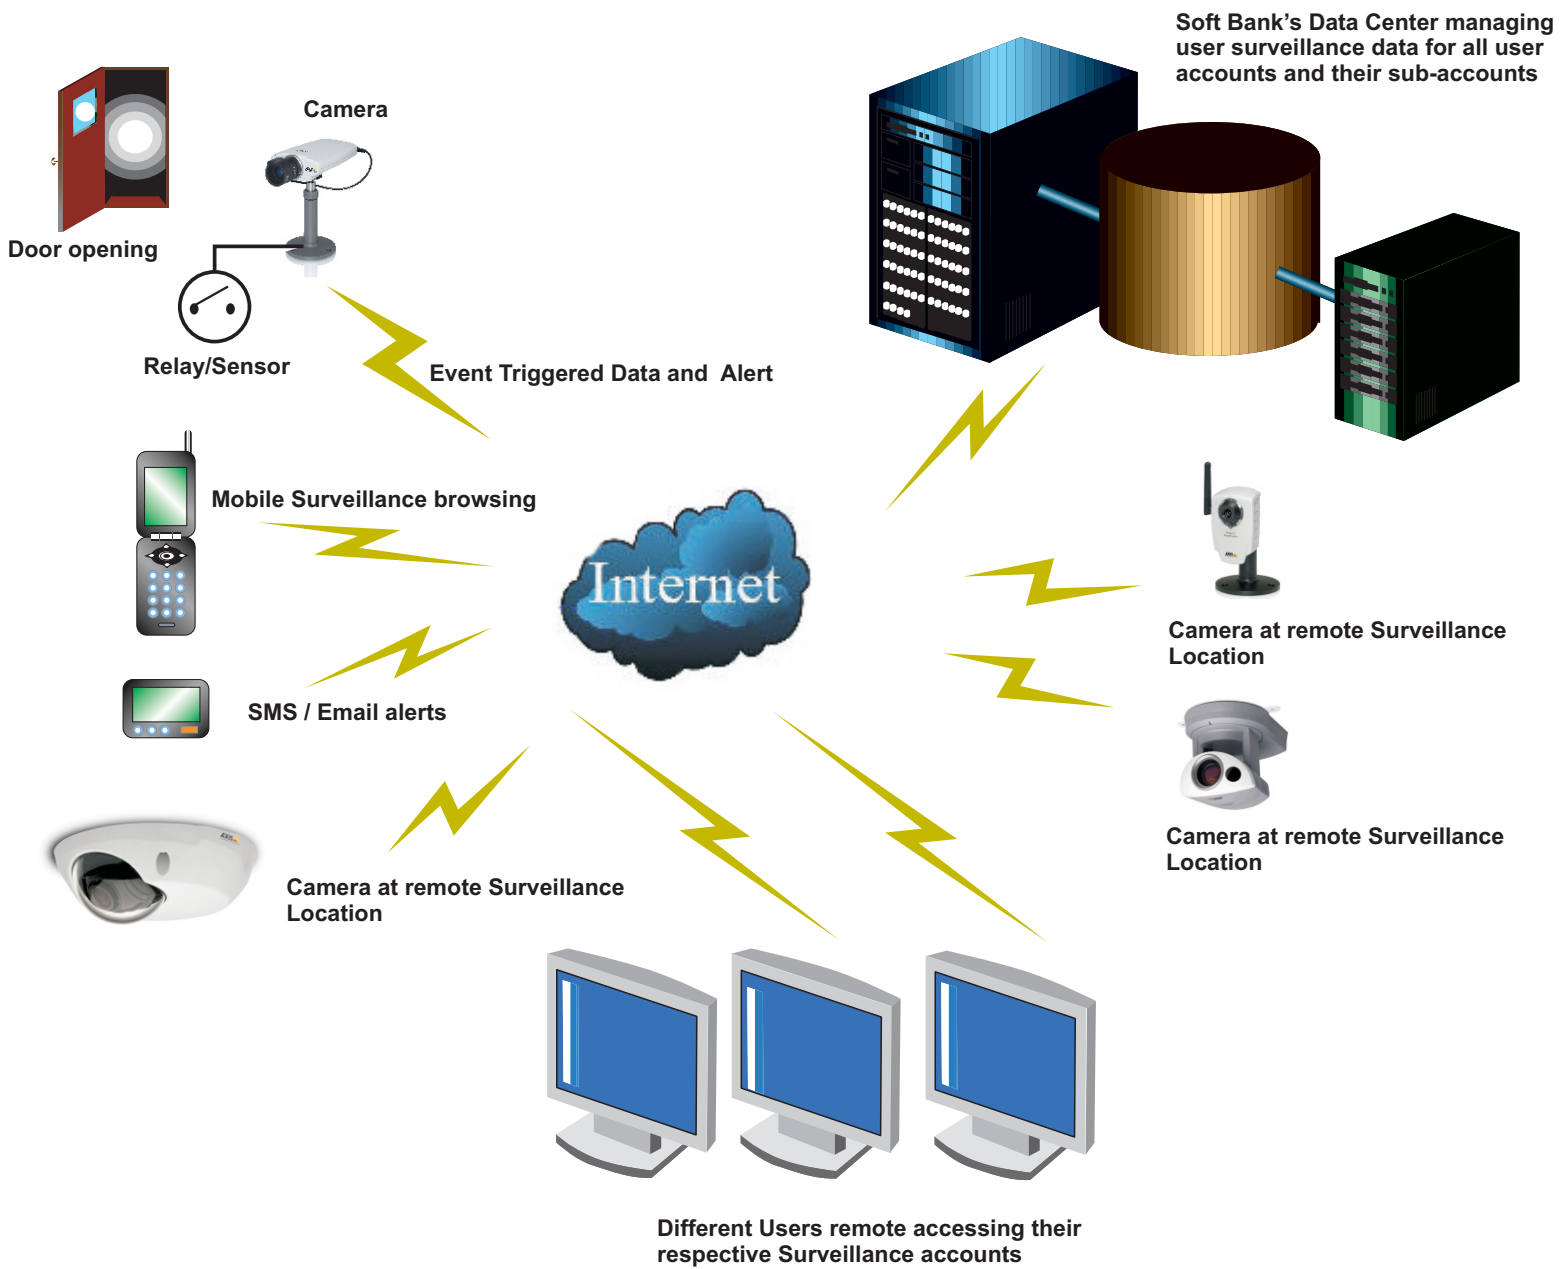

SoftBank has launched a Subscriber based Video Surveillance Solution providing a user to subscribe to a video surveillance solution for their home, office or any location that requires surveillance. To provide this sort of a Surveillance Solution, System K has provided very hi-tech video surveillance management system using the INTERNET CAMERA SYSTEM allowing for a very user friendly subscriber interface on the internet through which subscribers may manage their accounts.

The SoftBank video surveillance solution through usage of ICS, has provided users and businesses with the capability to very easily manage their surveillance wherever their different offices may be located in Japan and around the world. Subscribers can create various sub-accounts in manageable groups with defined access levels.

This Customized Solution of the Internet Cameras System has

- * Over 1000 Customers using this Surveillance service
- * Users across all spectrum of the Japanese society
- * A very user-friendly customized user interface
- * An Image Database with Intuitive Image Search function based on user criteria, such as location, date, time, user etc.
- * External Sensor/Motion Detection based recording
- * Email/SMS notification based on events
