

## BSW Partner Implements an IP Surveillance for the Narayana Hrudyalaya Hospital

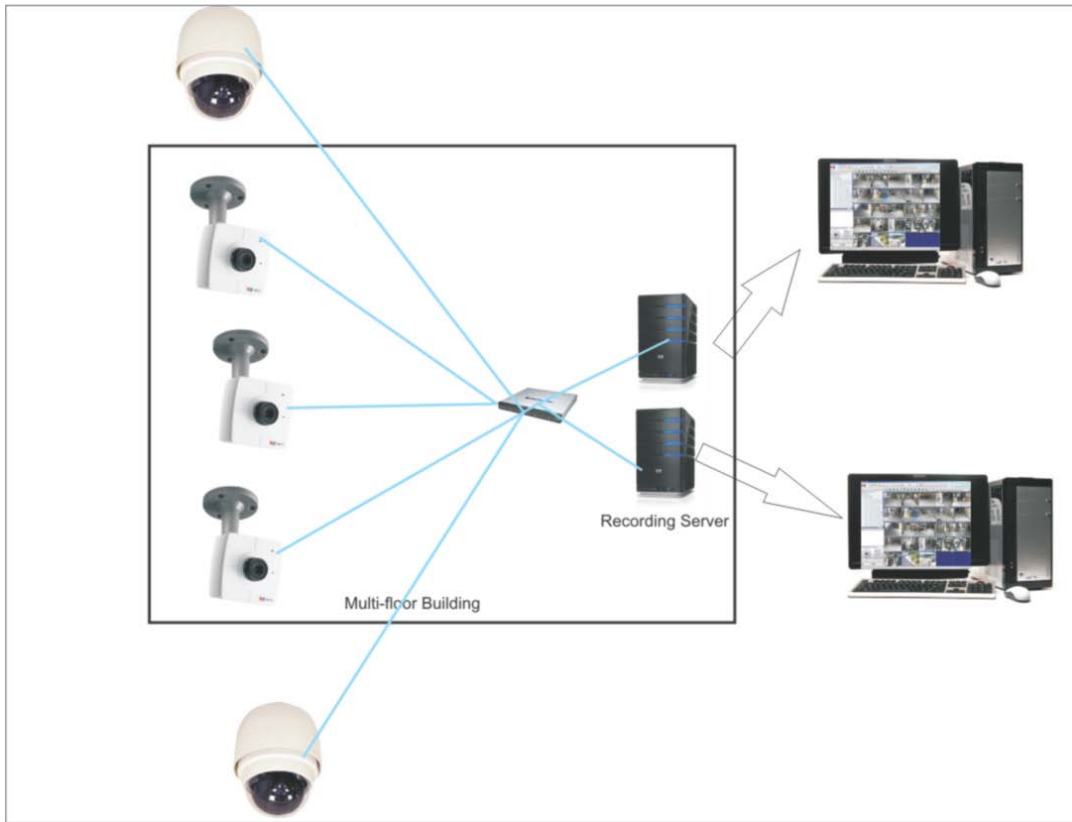

The Narayana Hrudyalaya Hospital located in Bangalore, India, is world-renowned for being one of the world's largest pediatric heart hospitals. It receives patients from all around the world and has performed over 15,000 successful surgeries in its lifetime. It is also a world-leader in telemedicine, and is also known for being more efficient than nearly any other hospital in the country, and even in the world.

**Narayana Hrudyalaya**

The hospital was in need of an enterprise level security solution for their facility to ensure the safety and well-being of their patients. Hospital security wanted to be able to monitor the large hospital premises so as to respond to incidents in a quicker and efficient way. The objective was also to analyze incidents and learn from them so that they could be avoided in future. For this task, **BSW** Soft was consulted by **Automation Systems and Services, Bangalore** to assist in the design and implementation of a surveillance system for the hospital.

### Solution Diagram

The server architecture is a design allowing for all 49 cameras to be continually transferring video data to the local server where it is authenticated and stored. Remote access by user or administrator is possible after authentication by the server. **BSW**, with the help of ACTi cameras and **Automation systems and Services** implementation team, the Narayana Hrudyalaya Hospital can be assured safety and enable a proactive surveillance for the entire hospital premises.
